

## Data Descriptor - Team 5

In the spreadsheet attached we evaluated different Open Science projects taking into account the Vienna Principles.

We collected our data from the official web pages of each project. In the column Project we have the project that's being evaluated. In the column on the left of the project we have the different researcher in charge of evaluating each project.

Project -> project being evaluated

Premise of the project in one simple phrase! -> short description of the project

On all the following columns, we assigned a value from 1 (minimum) to 5 (maximum) based on how much we think the project evaluated is in respect of the Vienna principle of the column. The columns are the following:

```
{  
    Accessibility  
    Discoverability  
    Publication  
    Reusability  
    Reproducibility  
    Transparency  
    Understandability  
    Collaboration  
    Evaluation  
    Public Good  
}
```

Total score -> Sum of the values of all the columns of the Vienna principles grade.

Positive remarks -> Good comments about the project

Improvement remarks -> Comments on how the project may be improved regarding the Vienna principles
